

Nuclear Careers

A specialist recruitment business supporting engineering and project delivery professionals in the nuclear infrastructure sector.

About Nuclear Careers

I run Nuclear Careers, a specialist recruitment business supporting engineering and project delivery professionals across the nuclear infrastructure sector. After a decade in corporate recruitment and two years working within the nuclear industry, I launched the business in 2025 to help address the UK's growing skills gap. With a strong network across civil nuclear, fusion, fission, ex-military and other regulated industries, we provide targeted recruitment alongside sharing sector news to help more people understand and access careers in nuclear.

“ *Knowing there is a local community who are supporting businesses to succeed has allowed me to know I'm not alone and there's the ability to upskill while growing.* **”**

Next steps

In the next six months, we will expand our client partnerships, take part in events with the Nuclear Institute and Women in Nuclear, widen our networking activity, and continue building our presence in the sector. It's an exciting period of growth with plenty of opportunity ahead.

Challenges & Ambition

Entering both the recruitment and nuclear sectors as a new business has been challenging, particularly due to established supply chains and long-standing industry relationships. A full rebrand and website rebuild were major early milestones. My ambition now is to grow a team and develop long-term partnerships with clients who value a specialist, relationship-led approach.

Support from Enterprise Oxfordshire Business

Completing the Enterprise Oxfordshire Business AI Strategy for Business course helped me understand how to use data and technology more effectively and ethically within the recruitment process, strengthening the foundations of the business.
